Funding Amount Desired: ₹2,00,000

The funding is required to transform BrainBlitz from its current prototype into a reliable, scalable platform for conducting real-time quiz and team-based competitions at college, school, and other educational events.

The funds will primarily be used for:

- **Cloud deployment and infrastructure:** AWS server, domain, SSL, monitoring, backups, and future database infrastructure.
- **Development and testing:** Improving the real-time competition system, multi-device connectivity, admin dashboard, question-bank management, and overall application reliability.
- **Event infrastructure:** Wi-Fi/network equipment and supporting hardware required to conduct competitions with multiple participants.
- **Security and scalability:** Implementing secure communication, authentication, session management, and infrastructure capable of supporting larger concurrent events.
- **Future development:** Adding features such as tournaments, leaderboards, performance analytics, result generation, multilingual questions, and additional question types.

The initial funding will allow BrainBlitz to be deployed and tested in real-world college and educational events and provide a foundation for scaling it into a general-purpose platform for conducting interactive quizzes and competitions across different subjects and domains.
